Changelog

The following is the changelog for v1 of the public NIBE Uplink API.

v1.2 (2019-01)

We are moving all of our online services to Transport Layer Security (TLS) 1.2+ to provide best-in-class encryption, and to ensure our service is more secure by default. As of January 31, 2019, NIBE Uplink API will no longer support TLS 1.0 and 1.1. This means that connections to NIBE Uplink API using TLS 1.0 and 1.1 will not function any more.

v1.1 (2017-09)

Functions for changing settings in a heating systems as well as supplying smart home data added.

v1.0 (2016-01)

Release of the public NIBE Uplink API.
